13. Assume the following program was compiled and executed using static scoping rules. What value of x is printed in procedure sub1? Under dynamic scoping rules, what value of x is printed in procedure sub1?

```
program main;
  var x : integer;
  procedure sub1;
    begin    { of sub1 }
      writeln('x =', x)
    end;    { of sub1 }
  procedure sub2;
    var x : integer;
    begin    { of sub2 }
      x := 10;
      sub1;
    end;    { of sub2 }
  begin    { of main }
    x := 5;
    sub2
  end.    { of main }
```
