

How to Master CS 5301

CS 5301
Spring 2018

Jill Seaman

1

How to master this class:

- Prepare and practice each week!
- Do the practice problems from the outline, writing your own solution from scratch. Do not use a solution online or from another student.
- Practice in the labs: DERR 231 or MCS 590 (eclipse or codeblocks) or on your own computer
- Make sure your solutions are correct (compile, run, execute, test on sample data)
- Do some practice on paper, to prepare for quizzes
- in general, do NOT memorize code
- If you get stuck on a practice problem, get help! (come to office hours, etc.)

2

Problem solving steps

- Understand the problem description
- Generate a hypothetical solution
 - Think in terms of steps computer must perform
- Encode the solution (write the C++ code)
- Check your work
 - Trace your code, go through it step by step, carry out the instructions to see if they will solve the problem (you must be able to read code)
 - Look for errors in your solution (incorrect syntax, missing or misplaced { }, undefined variables, etc).
